S. Harsha

Bangalore, Karnataka, India | +91 9019436213 | harshivahm@gmail.com | linkedin.com/in/harsha-s-381b2231a

Professional Summary

Backend Software Engineer proficient in Python, FastAPI, and PostgreSQL database management. Experienced in building scalable RESTful APIs, integrating relational database systems (Supabase/PostgreSQL), constructing frontend interfaces using React.js, and deploying cloud applications on Render.

Technical Skills

Languages & Front-end: Python, JavaScript, React.js, HTML5, CSS
Backend Frameworks & Protocols: FastAPI, RESTful APIs, Pydantic, SMTP
Databases & ORM: PostgreSQL, Supabase, SQLModel, SQLAlchemy, SQLite
Cloud & Developer Tools: Render (Deployment), Git, GitHub, VS Code, Vercel

Projects

Centralized College Counseling & Seat Allocation Platform | *FastAPI, React.js, Supabase, Render, SMTP* **2026**

- Engineered an automated seat allotment system processing student ranks and preferences utilizing the **Gale-Shapley Deferred Acceptance Algorithm** for deterministic matching.
- Developed backend RESTful APIs using **FastAPI** with Pydantic data validation, managing student registries backed by **Supabase (PostgreSQL)**.
- Built responsive student portals and administrative dashboards using **React.js** to facilitate real-time choice filling and seat status verification.
- Configured automated email notifications using the **SMTP protocol** for immediate seat allotment updates, and deployed the live system on **Render**.

Smart Expense Tracker & Analytics Platform | *FastAPI, React.js, Supabase, Render, SMTP* **2026**

- Engineered backend micro-services using **FastAPI** to log, categorize, and aggregate financial transactions backed by **Supabase (PostgreSQL)**.
- Developed dynamic SQL query filtering and engineered an automated PDF report generator for date-specific expense summaries.
- Built interactive frontend dashboards using **React.js** featuring dynamic bar chart visual analytics for tracking income and spending trends.
- Configured automated email delivery workflows utilizing the **SMTP protocol** to dispatch PDF statements, and deployed the application on **Render**.
